

cardiovascular system cardiac cycle pdf

Cardiovascular disease (CVD) is a class of diseases that involve the heart or blood vessels. Cardiovascular disease includes coronary artery diseases (CAD) such as angina and myocardial infarction (commonly known as a heart attack). Other CVDs include stroke, heart failure, hypertensive heart disease, rheumatic heart disease, cardiomyopathy, heart arrhythmia, congenital heart disease, valvular ...

Cardiovascular disease - Wikipedia

The circulatory system, also called the cardiovascular system or the vascular system, is an organ system that permits blood to circulate and transport nutrients (such as amino acids and electrolytes), oxygen, carbon dioxide, hormones, and blood cells to and from the cells in the body to provide nourishment and help in fighting diseases, stabilize temperature and pH, and maintain homeostasis.

Aging leads to a multitude of changes in the cardiovascular system, including systolic hypertension, increased central vascular stiffness, and increased pulse pressure. In this paper we will review the effects of age-associated increased vascular stiffness on systolic blood pressure, pulse pressure, augmentation index, and cardiac workload.

Cardiology Research and Practice - Hindawi

Normal cardiac hemodynamics. Understanding normal hemodynamic findings is integral for recognition of derangements present in CP and RCM. Although frequently separated during discussions of cardiac function, diastole and systole are intricately linked, with diastolic filling providing the preload necessary for generation of stroke volume via the Frank-Starling mechanism.
