Earth is the planet we live on. It is the third planet from the sun.It is the only planet known to have life on it. Lots of scientists think the earth formed around 4.5 billion years ago. It is one of four rocky planets on the inside of the Solar System.The other three are Mercury, Venus and Mars.. The large mass of the sun makes Earth move around it, just as the mass of Earth makes the moon ...

Earth - Simple English Wikipedia, the free encyclopedia

Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate.Various forms of life exist, such as plants, animals, fungi, protists, archaea, and bacteria.
