the elements in increasing order of their atomic weights and noted that every eighth element had properties similar to the first element (Table 3.2). The relationship was just like every eighth note that resembles the first in octaves of music. Newlands's Law of Octaves seemed to be true only for elements up to calcium.

An atom is the smallest part of an element that can exist. All the elements have been arranged in a table, called the Periodic Table, in order of their atomic numbers—the number of protons an element has in each of its atoms. Elements in the same group on the Table have similar properties.
