Control theory in control systems engineering is a subfield of mathematics and information engineering that deals with the control of continuously operating dynamical systems in engineered processes and machines. The objective is to develop a control model for controlling such systems using a control action in an optimum manner without delay or overshoot and ensuring control stability.

Systems engineering is an interdisciplinary field of engineering and engineering management that focuses on how to design and manage complex systems over their life cycles. At its core, systems engineering utilizes systems thinking principles to organize this body of knowledge. Issues such as requirements engineering, reliability, logistics, coordination of different teams, testing and ...

where  $\ln$  is the natural logarithm. The entropy is non-negative and is at most the natural log of the number of elements in  $X$ . Entropy is a fundamental concept in information theory: in the paper that originated that field, Shannon (1948) described entropy as a measure of how much "choice" is involved in the selection of an event. Thus a distribution with higher entropy involves ...
