The Hedgehog (Hh) signaling pathway is important in embryogenesis; overactivation is associated with cancer. Central to the pathway is the membrane receptor Patched 1 (Ptch1), which indirectly inhibits a G protein-coupled receptor called Smoothened. This inhibition is relieved when Ptch1 binds the secreted protein Hh. Gong et al. report the cryo-electron microscopy structures of human ...

1. Introduction. Phosphorescence, the spin-forbidden radiative decay of an electronically excited state, has been known for a long time. In 1941 Lewis and his coworkers first suggested that the long-lived phosphorescence of fluorescein in rigid media derives from the lowest triplet state. The first unequivocal demonstration of the fact that phosphorescence originates from a triplet state was ...

The PAX3 (paired box gene 3) gene encodes a member of the paired box or PAX family of transcription factors. The PAX family consists of nine human (PAX1-PAX9) and nine mouse (Pax1-Pax9) members arranged into four subfamilies. Human PAX3 and mouse Pax3 are present in a subfamily along with the highly homologous human PAX7 and mouse Pax7 genes. The human PAX3 gene is located in the 2q36.1 ...

The hallmark of a stone that obstructs the ureter or renal pelvis is excruciating, intermittent pain that radiates from the flank to the groin or to the inner thigh. This pain, known as renal colic, is often described as one of the strongest pain sensations known. Renal colic caused by kidney stones is commonly accompanied by urinary urgency, restlessness, hematuria, sweating, nausea, and ...

A novel sequence discovered in a computational screen appears distantly related to the p35 subunit of IL-12. This factor, which we term p19, shows no biological activity by itself; instead, it combines with the p40 subunit of IL-12 to form a novel, biologically active, composite cytokine, which we term IL-23.

The production of metallic materials is impressive not only due to the quantity produced, more than 10 9 tons/year, but also due to its diversity. It is estimated that there are more than 40.000 metallic alloys. Forging, rolling, extrusion and drawing deform about 90% of the production of metals and ...
